Despite the growth and prominence of chat apps and mobile messaging services, we still send and receive emails every day. Email is a common form of communication in business, but also an integral part of our online daily life, as most websites require email addresses to create accounts. Microsoft Outlook commands an active user base of more than 400 million people, many of whom open emails from mobile devices running Android and iOS platforms. Consequently, syncing Outlook on mobile devices and with other services is necessary to make it easier for any device or location to access it. One of the most powerful productivity features of any email communication is the contact list, which is critical to our personal and business communication. If you're a loyal Microsoft Outlook user and don't know how to sync Outlook contacts with your mobile device or other email services, don't worry. We'll show you some workarounds to use. How to sync Outlook contacts The steps in this guide may vary between operating systems and devices. Make sure that access to contacts is allowed for Outlook before proceeding with the sync configuration. Sync Outlook contacts with Android To sync Outlook contacts with your Android device, your email provider must use Microsoft Exchange ActiveSync. Most large providers like Gmail do. On your Android device, open Settings, tap Apps (or Apps). Under App settings, tap Permissions. Switch the Contacts switch to enable it (if off). Open the Outlook app and go to Settings.Tap your account, then tap Sync Contacts Sync Contacts Outlook Contacts with Gmail Gmail is a popular email service with over 1.5 billion active monthly users. Fortunately, it's easy to sync your Outlook contacts with this provider because it uses Microsoft Exchange ActiveSync. To sync your Outlook contacts with Gmail, download the Gmail app (if it's not already on your device) or update it. Register your Outlook account in Gmail. You'll need a valid Outlook account to do this, so register for one if you don't have it, set it up, and log in to your computer to verify that synchronization works correctly. Sign in to your Outlook account from the Gmail app using the same credentials you use on your desktop. Open Gmail and tap Menu (three horizontal) on the left side. On the next page, you'll see a list of email services that the gmail app supports. Tap Troca and Office 365. Note: Do not select Outlook, Hotmail, and Live because these services use IMAP and POP, which are synchronization protocols that cannot synchronize contacts or calendar. They only sync emails. Enter your email address and password on the next page. It will begin validating the server settings on your Android device. If a pop-up requesting remote security appears, tap OK and complete your login on the next page. Note: Make sure Gmail can access your contacts and calendar. You can check this by going to Settings > Apps (Apps) > Permissions and switching the Contacts switch to green. Synchronizing Outlook contacts with iPhone iPhones usually does a good job of synchronizing and updating contacts between apps and devices. This is not always the case, especially when there are incorrect permissions settings or general software issues, such as bugs that prevent Outlook from syncing with your phone. You can sync Outlook contacts on your iPhone using Settings, iTunes, iCloud, via email, importing as vCards or through Exchange. Using settings open settings and tap in Outlook > Contacts Switch app in the background Update to green. Open the Outlook app and go to Settings > Your Account > Sync Contacts Using iTunes In addition to being a music player or secure storage tool, iTunes can manage and store data from your iPhone as well, making it easy to update and transfer your Outlook contacts between devices. Make sure iCloud is turned off before using iTunes to sync your Outlook contacts. Connect your iPhone to your PC and open iTunes. Tap the iPhone icon and go to Settings > Info. Tap Sync Contacts with check box and select Outlook from the list. Select Request to complete the configuration. Using iCloud Before you sync your Outlook contacts with your iPhone with iCloud, make sure that the iCloud for Windows control panel is available or installed on your PC. Note: iCloud doesn't only let you sync contacts to the cloud. If you don't mind uploading your calendars, emails, and contacts completely to iCloud storage, take the steps below. Start iCloud on your PC and sign in with your ID and password. Tap the Mail, Contacts, Calendars, and Tasks check box. Tap Apply. Via email You can transfer your contacts from Outlook to your iPhone using your email, although it is a rather time-consuming process. Open the Outlook desktop app. Click Archive > Open > import. In the import/export wizard, select Export to a file. Click Next. Click Separate Comma Values (Windows) and click Next. Select the folder with the contacts you want to export and click Next. Name your CSV file, save it and click Next > Finish. Compor a new email and upload the CSV file that Outlook generates as an attachment and send it to an email address connected to your iPhone. On your iPhone, open the email, tap the attachment, and follow the steps until Add all contacts option. Note: Not all iOS devices work with CSV files in the same way. Some just a preview of the file without asking you to add them as contacts. Importing contacts As vCards This method allows you to sync outlook contacts with iPhone by converting them to vCards or electronic business cards that you can see in any version of Outlook. However, vCards are created only in the Outlook desktop application. Open Outlook and click Contacts. Choose the contacts you want to sync and click File>Save As>Save as type and select vCard files. Choose one To save your vCard, give it a name and click Save.In iCloud.com, log in and click Settings > Import vCard. Select the vCard you saved and click Import. iCloud will add your contacts to the All Contacts folder. The challenge with using vCards is that you have to create and import a new one every time you add new contacts in Outlook. Through Exchange This method only works if your iPhone is connected to your internal corporate network. If your company has an Exchange server, you can sync your Outlook contacts with it and access them on your iPhone. Open your iPhone and go to Settings > Mail, Contacts, Calendars (Select Exchange if it's the first time you set this up). Enter your email, username and password and click Next. Your iPhone will contact the Exchange Server, so make sure you know the server address as you'll need to enter it here. Choose Contacts from the options of items you want to sync and you're ready to go. Syncoutlook contacts with iPad To iPad, you have two options to use when syncing Outlook contacts – iTunes or iCloud. If you use iCloud on your computer, you can copy contacts to iCloud and access them from your iPad. However, if you use iTunes on your computer, you can sync contacts using iTunes to your iPad. Using iTunes Make sure you have the latest version of iTunes, open it and sign in with the credentials you use on your iPad.Connect your iPad to your computer and select it from iTunes. Click Info and select sync options for email, calendars and contacts, in this case sync contacts with > Outlook. If you have multiple contact groups, specify what you want to sync by clicking Select Group, or sync all of them and click Sync. Click the Summary tab for wireless sync and click Sync with this device via WiFi. From now on, when your iPad is turned on and iTunes is running on your computer, synchronization will happen automatically. Use iCloud Before using this method, make sure you have the iCloud Control Panel for Windows on your computer. Sign in with your iPad credentials and select the sync options you'd like to use – in this case, they're contacts with Outlook. Open settings on your iPad.Select emails, contacts, calendars. Click iCloud. Sign in with your Apple ID and select Mail, Contacts, and Calendars to sync them with Outlook via iCloud. You can choose to select other iCloud sync options, such as Find My iPhone or documents and data. Sync to Outlook.com or swap open settings on your iPad and select email, contacts, and calendars, and tap Add account. Tap Microsoft Exchange to sync with your work server, or select to sync with an account Outlook.com. Enter your email, username, and password (if you connect via Exchange Server, enter your domain name, although it's optional). Tap next. Your iPad will contact the Exchange Server. Enter the domain name here and tap Next.Select the services you'd like to sync – email, contacts or calendars – and that's it. Sync Outlook contacts with iCloud If you have a PST file in your that has all your Outlook profile data, you can import the contacts into iCloud in two parts – convert the PST contacts into vCards and then import the file into iCloud. Convert a PST file to a vCardVCF You can convert the PST file on a vCard using a tool like SysTools vCard Export Tool. Download the tool to your computer and click Add file. You will have the File and Folder options. If you have a file, click the File option. If they are multiple files in a folder, click the Folder option. Click Search and choose your PST file, and then click Add. The tool will show a preview of the complete pst file data. Select contacts and click Export. In export options, click vCard and choose it from your location. Click Export to convert all contacts to a VCF file. You will receive a notification that the export is complete. Go to the location folder and check for the VCF file. Import an iCloud Sign vCard into your account using your iCloud credentials. Click Contacts and go to the gear icon at the bottom end of the screen. Click the icon and select Import vCard. Click Search to find your VCF file, select it, and click Open. All your Outlook contacts in the vCard file will sync with iCloud. lcloud.
